Dear Peter

**Re: Pumping Solutions SS Pump Valve**

The adoption of your valves to diaphragm pumps has indeed extended the uses of diaphragm pumps at Chain Valley Coal Mine.

There is no question that the SS Valve Pump can move slurry up to 20mm solids size.

We have used your pump in the following areas:

- i) Removing slurry from shuttle car wheeling roads
- ii) Removing slurry from belt underpasses
- iii) Cleaning out vehicle wash down pits

In conclusion, these pumps fill a significant gap in services and the mining industry is likely to have considerable demand for your equipment.

Yours sincerely

Owen Farrugia  
Mine Manager
